In vitro conservation of Apocynaceae rare and endemic plant species of Indian Thar Desert

Suman Parihar

Department of Botany, JNV University, Jodhpur, India

Glossonema varianae and *Caralluma edulis* are endemic, edible and nutraceutically important plant species of the extreme arid regions of the Thar Desert. They belong to the family Apocynaceae (earlier known as Asclepiadaceae) and their common names are Pimpa and Dudiha. Due to increased anthropogenic activities, habitat destruction and grazing of complete plant prior to reproductive maturity restrict the natural propagation of these plants. Hence there is need for development of non-conventional methods for propagation and conservation of these important plants. To establish the *in vitro* propagation protocol of *C. edulis* we have used nodal shoot segments (3-4 cm long) for initiation of culture in liquid as well as semisolid Murashige and Skoog (MS) medium. Bud break was observed earlier (within 7-10 days) on liquid MS medium as compared to semi solid MS medium (18-20 days). Shoots were multiplied through subculture of explants on different concentrations of 6-benzyladenine (BAP) alone and in combination with auxin (IAA). For induction of regenerative callus of *G. varianae*, shoot segments were used as explants and regeneration and multiplication of shoots was attempted. Different parameters were studied for induction and proliferation of callus from the explants like, effect of different concentration of sucrose, PGR and different strength of salts of MS medium. The best response was observed on full strength MS medium containing 2.0 mg/l 2, 4-D with 3% sucrose. All the *in vitro* generated plants of *Glossonema varianae* and *Caralluma edulis* are successfully hardened in the Green House and transferred to the nursery.

Impact of magnetopriming with pulsed electromagnetic field on plant growth and yield of durum wheat: a field study

³School of Biochemistry, Devi Ahilya Vishwavidyalaya, Bhanwar Kuwa, Indore- 452001 (M.P.)

Researchers have approved the use of magnetic field as a new pre-sowing physical seed priming method which is environmental friendly technique. The experiment was conducted to study the effect of magnetopriming with pulsed magnetic field (PMF) on germination and early growth characteristics under control laboratory plant growth and yield of durum wheat (*Triticum durum*) under ambient field conditions. The seeds of durum wheat were treated for 60 mins (4 min on time and 3 min off time) with 4 different frequencies of PMF (50mT, 100mT, 150mT and 200mT). The results revealed that there was significant enhancement after magnetopriming by PMF in seed germination and early seedling growth parameters (root and shoot length and vigour indices) under laboratory conditions as compared to untreated ones. The stimulatory effect of PMF pre-treatment of seeds also persisted in wheat plants under field conditions till its maturity, where it stimulated vegetative growth and biomass accumulation as compared to their untreated ones which resulted in high yield of durum wheat in terms of higher number of tillers, grain yield, grain weight and harvest index. It indicates the positive influence of magnetopriming by PMF. Our results suggested that pulsed magnetopriming is effective in dry seed priming treatment for seed invigoration and higher yield in durum wheat.

Abstract

Alkaline proteases are enzymes that carry out hydrolysis of proteins under alkaline conditions. In the present study, alkaline protease from *Neocosmospora sp.* was produced by solid state fermentation using Wheat Bran and Custard Apple Seed Powder (CASP) in the ratio 4:1 as solid medium. Crude enzyme was harvested after 4th day of incubation and purification of enzyme was performed subsequently. Purified enzyme was loaded on Native PAGE to check homogeneity and purity. Optimum temperature and pH of enzyme were found to be 60°C and pH 8, respectively. The enzyme was completely inhibited by phenyl methyl sulfonyl fluoride (PMSF) suggesting its serine nature. Casein was the most preferred substrate for enzyme activity having K_m and V_{max} values of 0.015mg/ml and 454U/ml, respectively. Enzyme was almost 100% active in presence of organic solvents like toluene and benzene, surfactants like Tween-20, Tween-80 and Triton X-100 and detergents like Tide and Ghadi. Performance evaluation of alkaline protease was tested for dehairing of goat skin and removal of different stains.

Registration ID: 40241

Abstract no. ME-P/006 (40241)

Sub-theme: Microbial Enzymes & Processing

Production of alkaline protease from *Penicillium* sp. and its utility in commercial applications

Khyati Jaiswal, Manisha Malik and Fatema Matkawala

Maharaja Ranjit Singh College of Professional Sciences Hemkunt Campus, Khandwa Road, Indore (M.P.) India

Corresponding author: Fatema Matkawala

Mail ID: fmatkawala@gmail.com (Mobile: 9926052846)

Abstract

Alkaline proteases are capable of hydrolysing a broad range of peptide bonds in variety of proteins. In this study, several fungal strains were screened for alkaline protease production by growing fungal isolates in liquid Czapek Dox medium. Supernatant obtained after 4th day of incubation was used to measure enzyme activity. Isolate LG, morphologically identified as *Penicillium* gave maximum alkaline protease activity and was used for further studies. The media for production of alkaline protease was optimized. For this, three substrates mainly wheat bran, rice bran and custard apple seed powder (CASP) were utilised and their different combinations were taken to grow selected isolate (LG). Out of which, wheat bran and CASP in the ratio 1:1 gave maximum alkaline protease production. The particle size and moisture content were also optimised for the selected combination. Partial purification of the enzyme was done using ammonium sulphate fractionation and DEAE anion exchange chromatography. The enzyme was further utilised to check its performance in different industrial applications like stain removal, dehairing of goat skin and generation of bioactive peptides.

Notice

Mr. Kshitij Bhushan, student of M. Sc. Biotechnology participated in the International Conference on "Photobiology, Photochemistry and Plant Biotechnology" at MLSU, Udaipur, Rajasthan and presented his research work entitled "Impact of magnetopriming with pulsed electrogenetic field on plant growth and yield of durum wheat: A field study". He secured 3rd position in the Best Poster Award category. A Post Conference Session is scheduled on 13/05/2019 at 1.00 PM in Room No. 14. The session will include his presentation and experience gained during the conference. It is compulsory for all M. Sc. Biotechnology and Microbiology students to attend the same.
